

Usman Khalid

contact@ukhalid.dev | www.ukhalid.dev | github.com/Usman241002

Skills

Languages: TypeScript, JavaScript, Python, PHP, SQL, C, C++, Dart

Frontend: React, Vue 3, Vite

Backend: Node.js, PHP, Flask, REST APIs, Socket.IO, MVC

Databases: MySQL, PostgreSQL, SQLite

Tools & Infrastructure: Git, Docker, Linux, GitHub, Cloudflare, Vercel

Software Engineering: Object-Oriented Programming, RESTful API Design, Testing, System Architecture, Modular Design

Experience

Job Title, Software Engineer/Founder, KODON – Birmingham, UK

August 2026 – Present

- Building and maintaining a modern web presence and digital infrastructure for local businesses, with a focus on scalable frontend architecture and maintainable software.
- Designed and developed responsive interfaces using Vue 3, TypeScript and modern CSS, translating Figma designs into reusable component systems.
- Develop backend services and APIs using JavaScript, Node.js and Koa, with an emphasis on modular architecture and reusable services.
- Design automated and integrated digital solutions for businesses, combining web applications, APIs, email infrastructure and third-party services.

Projects

ChatApp - TypeScript, React, Socket.IO, REST APIs

<https://chat-app-mk4.vercel.app/>

- Developed a real-time anonymous messaging application using React and TypeScript with Socket.IO for bidirectional communication between clients and the backend.
- Implemented frontend state management and API integration to handle conversations and continuously changing application data.
- Designed the application around reusable React components and a structured frontend architecture to maintain the codebase as functionality expanded.

Portfolio Platform – Vue 3, JavaScript, Koa, REST API, PostgreSQL

<https://www.ukhalid.dev/>

- Built a full-stack portfolio management platform with a Vue frontend and Koa REST API backed by PostgreSQL
- Developed API endpoints in Koa for managing portfolio content, allowing projects and technical information to be updated without modifying the frontend.
- Tested REST API endpoints using Jest, implementing automated unit and integration tests to verify expected responses, input validation and error handling, improving backend reliability and reducing regressions during development.
- Applied MVC architecture and database-driven design to separate application logic, data access and presentation.

Sphere Social Media API — Vue 3, JavaScript, Koa, REST API, MySQL

<https://github.com/Usman241002/Sphere>

- Developed a RESTful social media backend using Vue 3, MySQL and MVC architecture.
- Designed database structures and API endpoints for managing users, posts and application data.
- Implemented a structured backend architecture focused on separation of concerns and maintainability.

Education

Coventry University – BSc (Hons) Software Engineering First Class

Sept 2023 - July 2026
